[Rdm Mac Redis Desktop Manager For Mac](#)

The image shows two overlapping windows. The primary window is 'Redis Desktop Manager', which displays a tree view of database instances on the left, including 'localhost' and 'live'. The main pane shows the 'settings' key with a value of `{ "isEnabled": true, "timeout": 1500 }` in JSON format. Below this, there are buttons for 'Restore', 'Paste', 'Link', 'Selection', 'Image', and 'Default'. A 'Selection Notes' section below the buttons contains the text: 'Here you will see the text that was selected when snapshot was captured.' The secondary window is 'Flamory', a browser window showing search results for 'Redis Desktop Manager' and other related terms like 'Microformat - Wikipedia', 'Graph (mathematics) - Wikipedia', 'Under Frozen Tundra, an Icebreaking Ship Unco', 'Semantic Web - Wikipedia', and 'Concept map - Wikipedia'.
